

Mercedes “A” class A140, A160, A190

Models with MSM2 engine management system

The starter motor STM651 requires a full 12V battery voltage to energise the solenoid.

Mercedes “A” class with MSM2 engine management system does not give 12v to the solenoid. You must replace this starter with the solenoid that has a chip in.

The starters looks similar, they are not interchangeable – damage to the ECU can be caused by installing and connecting the wrong starter.

Check the system before installing the starter.

**Rolling Components cannot be held responsible
for subsequent damages**

**STM651 Standard 12V Solenoid
STM1097 Built in Chip in Solenoid**
